Project Name	“An Employee Requests Installation of Licensed Software through the Service Catalog”
Maximum Marks	4 Marks

Empathy Map Canvas:

Employees need a simple, centralized, and transparent process to request licensed software required for their work. They want to select the required software, provide the necessary business justification, receive timely approval, and clearly track the request from submission to installation. A ServiceNow Service Catalog can reduce manual communication, improve visibility, automate approvals and notifications, and help ensure that software is installed only after the required authorization.
