Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	22 September 2026
Team ID	
Project Name	An employee requests installation of licensed software through the service catalog
Maximum Marks	4 Marks

Functional Requirements:

The proposed solution provides a centralized ServiceNow Service Catalog process for licensed software requests. It enables employees to submit requests, captures the required information, automates approval and assignment, verifies license availability, supports IT fulfillment, and provides request tracking and notifications until the software installation is completed.

.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Software Catalog	View available licensed software Select required software View software details and license information
FR-2	Software Request Submission	Submit software installation request Enter business justification Provide employee, department and device details
FR-3	Request Validation	Validate mandatory fields Check software availability Generate unique request number
FR-4	Manager Approval	Route request to manager Approve or reject request Add approval/rejection comments
FR-5	IT Assignment & Fulfillment	Assign approved request to IT Support Team Review request details Install licensed software on employee device
FR-6	Request Status Tracking	Track request status Update status during fulfillment View request progress through Service Portal
FR-7	Notifications	Send request submission notification Send approval/rejection notification Send installation completion notification

Non-functional Requirements:

.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The Service Catalog should provide a simple and user-friendly interface so employees can easily find the required licensed software, enter the necessary information, and submit a request without confusion.
NFR-2	**Security**	The system should protect employee, request, and license information using appropriate access controls. Only authorized users should be able to submit, approve, manage, or fulfill software requests.
NFR-3	**Reliability**	The system should process software requests accurately and maintain request information throughout the approval and installation process without losing data.
NFR-4	**Performance**	The Service Catalog and request pages should load quickly, and requests should be submitted and processed within an acceptable response time.
NFR-5	**Availability**	The software request service should be available whenever employees need to submit or track their requests, with minimal service interruptions.
NFR-6	**Scalability**	The system should be capable of handling an increasing number of employees, software requests, approvals, and IT fulfillment tasks without significant performance degradation.
