Project Design Phase
Solution Architecture

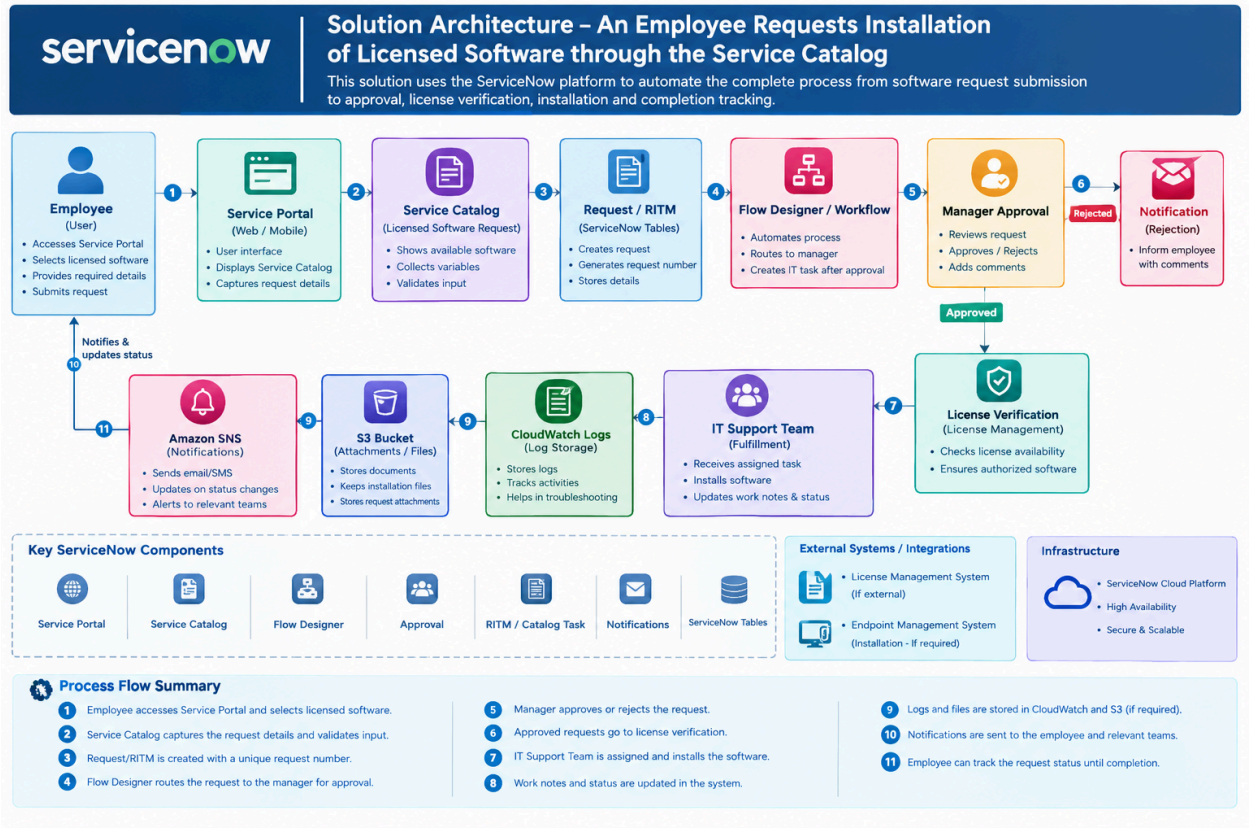

Date	22 Septemeber 2026
Team ID	
Project Name	An employee requests installation of licensed software through the service catalog
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture provides a centralized ServiceNow-based platform that connects employees, managers, license management, and IT support. It automates the complete software request lifecycle from submission and approval to license verification, installation, status tracking, and completion notification.

- The solution is built on the **ServiceNow platform** to manage the complete licensed software request process.
- Employees can access the **Service Catalog** and select the required licensed software.
- The employee provides necessary details such as **software name, business justification, department, and device information**.
- After submission, the system creates a **software request/RITM** and generates a unique request number.
- The request is automatically routed to the **appropriate manager for approval**.
- The manager can **approve or reject** the request and provide comments.
- Once approved, the system checks the **availability of the required software license**.
- Approved requests are automatically assigned to the **IT Support Team** for fulfillment.
- The IT team installs the approved software on the employee's device and updates the **work notes and request status**.

Solution Architecture – An Employee Requests Installation of Licensed Software through the Service Catalog
This solution uses the ServiceNow platform to automate the complete process from software request submission to approval, license verification, installation and completion tracking.
Employee
(User)
Accesses Service Portal
Selects licensed software
Provides required details
Submits request
Service Portal
(Web / Mobile)
User interface
Displays Service Catalog
Captures request details
Service Catalog
(Licensed Software Request)
Shows available software
Collects variables
Validates input
Request / RITM
(ServiceNow Tables)
Creates request
Generates request number
Stores details
Flow Designer / Workflow
Automates process
Routes to manager
Creates IT task after approval
Manager Approval
Reviews request
Approves / Rejects
Adds comments
Rejected
Notification
(Rejection)
Inform employee with comments
Approved
License Verification
(License Management)
Checks license availability
Ensures authorized software
IT Support Team
(Fulfillment)
Receives assigned task
Installs software
Updates work notes & status
CloudWatch Logs
(Log Storage)
Stores logs
Tracks activities
Helps in troubleshooting
S3 Bucket
(Attachments / Files)
Stores documents
Keeps installation files
Stores request attachments
Amazon SNS
(Notifications)
Sends email/SMS
Updates on status changes
Alerts to relevant teams
Notifies & updates status
Key ServiceNow Components
Service Portal
Service Catalog
Flow Designer
Approval
RITM / Catalog Task
Notifications
ServiceNow Tables
External Systems / Integrations
License Management System (If external)
Endpoint Management System (Installation - If required)
Infrastructure
ServiceNow Cloud Platform
High Availability
Secure & Scalable
Process Flow Summary
1 Employee accesses Service Portal and selects licensed software.
2 Service Catalog captures the request details and validates input.
3 Request/RITM is created with a unique request number.
4 Flow Designer routes the request to the manager for approval.
5 Manager approves or rejects the request.
6 Approved requests go to license verification.
7 IT Support Team is assigned and installs the software.
8 Work notes and status are updated in the system.
9 Logs and files are stored in CloudWatch and S3 (if required).
10 Notifications are sent to the employee and relevant teams.
11 Employee can track the request status until completion.
