EXECUTION & REPORT SUBMISSION

Project: An Employee Requests Installation of Licensed Software through the Service Catalog

Document Field	Details
Date	_____
Team ID	_____
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the User Acceptance Testing (UAT) coverage and any open issues for the “An Employee Requests Installation of Licensed Software through the Service Catalog” project before release or demonstration. It describes the key user workflows to be checked by an employee, approver, and IT fulfillment team. The results must be updated using actual test execution; the sample report does not claim that testing has already been completed.

2. Defect Analysis

This section records defects identified during UAT and how each defect was resolved. Since actual defect records were not provided, the table below is a blank project-specific reporting template. Enter the number of issues in each category after testing.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
External	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	0	0	0	0	0

Severity guide: Severity 1 = critical blocker; Severity 2 = major issue; Severity 3 = moderate issue; Severity 4 = minor issue. Use your course or organization’s official definitions if they differ.

3. Test Case Analysis

This section summarizes the total test cases, cases not tested, failed cases, and passed cases for the major areas of the ServiceNow workflow. The following are suggested test areas; fill in the counts based on actual execution.

Section	Total Cases	Not Tested	Fail	Pass
Service Catalog Access	3	—	—	—

Section	Total Cases	Not Tested	Fail	Pass
Request Form & Validation	5	—	—	—
Request / RITM Creation	3	—	—	—
Approval Workflow	5	—	—	—
IT Fulfillment Task	4	—	—	—
Notifications & Status Tracking	4	—	—	—
Security / Access Controls	3	—	—	—
Performance / Response Time	3	—	—	—
Total	30	—	—	—

4. Suggested UAT Scenarios

Test ID	Scenario	Expected Result
UAT-01	Open the Licensed Software Request catalog item.	The item is visible to the intended employee and opens successfully.
UAT-02	Submit the form with a required field missing.	Validation identifies the missing information and prevents an incomplete submission.
UAT-03	Submit a valid software request.	ServiceNow creates the request and requested item (REQ/RITM).
UAT-04	Route the request for approval.	The configured approver receives an approval task.
UAT-05	Reject a test request.	The decision is recorded and the employee is informed according to configuration.
UAT-06	Approve a test request.	The request moves to the configured IT fulfillment step.
UAT-07	Update the fulfillment task.	Request progress reflects the task update.
UAT-08	Complete the request.	The configured completion status and notification are produced.
UAT-09	Check access permissions.	Only authorized users can view or update restricted records.
UAT-10	Measure catalog and submission response times.	Observed timings are recorded and compared with the agreed target.

5. UAT Summary and Sign-off

UAT status: ■ Not started ■ In progress ■ Passed ■ Passed with issues ■ Failed

Open issues / observations: _____

_____

Tested by: _____ Reviewer / Approver: _____

Sign-off date: _____

6. Notes for Submission

• Replace blank counts with actual defect and test execution numbers.
• Attach screenshots from your ServiceNow instance showing the catalog item, submitted request, approval, fulfillment task, and completion status.
• Do not report all cases as passed unless you executed and verified them.
• Add your team ID, test date, and reviewer details before submission.
